The second component of the musculoskeletal system are the joints. If bones provide the framework, the joints provide the flexibility by permitting movement. A joint, or articulation, is the junction between two or more bones. There are three main types: fibrous, cartilaginous, and synovial.

Musculoskeletal system: Main bones, joints & muscles | Kenhub

A healthy balanced diet will help you build strong bones from an early age and maintain them throughout your life. You need sufficient calcium to strengthen your bones and vitamin D to help your body absorb calcium. Poor bone health can cause conditions such as rickets and osteoporosis and increase the risk of breaking a bone from a fall later in life.
