DRUG USE AND HIV - AIDS Information, Education, Action ...

Illicit Drugs and HIV/AIDS Risk Injection drugs are the second leading cause of HIV infection, preceded only by unprotected sex. Both of these risk factors can be attributed to illicit drug use including heroin, cocaine, stimulants and other drugs. These risks disproportionately affect certain populations.

The Connection Between Substance Abuse & HIV/AIDS

Recreational drugs include injection and non-injection drugs such as opioids (including heroin), methamphetamine (meth), crack cocaine, and inhalants. Drug and alcohol use can harm the health of a person with HIV. Specifically, drug and alcohol use can weaken the immune system and damage the liver.

HIV and Drug and Alcohol Use - Information on HIV/AIDS ...

While intravenous drug use is well known in this regard, less recognized is the role that drug abuse plays more generally in the spread of HIV by increasing the likelihood of high-risk sex with infected partners. 3 The intoxicating effects of many drugs can alter judgment and inhibition and lead people to engage in impulsive and unsafe behaviors.

Long Lasting HIV Drugs Hold Lessons For Us All

In 1995, the FDA approved saquinavir, the first in a different anti-HIV (antiretroviral) drug class called protease inhibitors. Like NRTIs, protease inhibitors stop the virus from copying itself,...

The History of HIV Treatment: Antiretroviral Therapy and More

The management of HIV/AIDS normally includes the use of multiple antiretroviral drugs in an attempt to control HIV infection. There are several classes of antiretroviral agents that act on different stages of the HIV life-cycle. The use of multiple drugs that act on different viral targets is known as highly active antiretroviral therapy. HAART decreases the patient's total burden of HIV, maintains function of the immune system, and prevents opportunistic infections that often lead to death. HAA

Management of HIV/AIDS - Wikipedia

People typically associate drug misuse and HIV/AIDS with injection drug use and needle sharing. When people who inject drugs share "equipment"—such as needles, syringes, and other drug injection paraphernalia—HIV can be transmitted between users. Other infections, such as hepatitis C, can also be spread this way.
