NX Topology Optimization is an add-on to the NX Advanced Simulation product, and so set up of the topology optimization model is very simple: • Create a FE model of the design space, loads, and boundary conditions within NX Advanced Simulation • Define which elements in the model

that the optimization can modify • Define a design objective, such as maximizing stiffness • Define design constraints, such as volume, and also manufacturing constraints to ensure that the component can be produced

Tools of Tomorrow: Topology Optimization NX CAD | NX Design

The output of topology optimization is a JT facet body that can be converted to a convergent facet body. Once that is done, the convergent body can be

used with a traditional CAD body. If we need to rebuild the facet body as a normal CAD body instead, we can use NX Reverse Engineering functions to create an exceptionally high quality model in a short time.
